Part I
The Ocean's Role in the Climate System

1. The Ocean as a Component of the Climate System 3

Thomas F. Stocker

1. Setting the Scene 3
2. The Ocean as an Exchanging Earth System Reservoir 5
3. Atmosphere–Ocean Fluxes and Meridional Transports 8
4. Global-Scale Surface and Deep Ocean Circulations 11
5. Large-Scale Modes of Variability Involving the Ocean 15
6. The Ocean's Role in Past Climate Change 17
7. The Ocean in the Anthropocene 20
8. Concluding Thoughts 25
   Acknowledgments 25
   References 25

2. Paleoclimatic Ocean Circulation and Sea-Level Changes 31

Stefan Rahmstorf and Georg Feulner

1. Introduction 31
2. Reconstructing Past Ocean States 32
   2.1. Proxies for Past Ocean Circulation 32
   2.2. Past Sea-Level Proxies 34
   2.3. Models 38
3. The Oceans in the Quaternary 39
   3.1. The Last Glacial Maximum 40
   3.2. Abrupt Glacial Climate Changes 42
   3.3. Glacial Cycles 45
   3.4. Interglacial Climates 46
4. The Deeper Past 46
   4.1. Challenges of Deep-Time Paleoceanography 46
   4.2. The Oceans During the Mid-Cretaceous Warm Period 48
5. Outlook 51
   Acknowledgments 52
   References 52

Part II
Ocean Observations

3. *In Situ* Ocean Observations: A Brief History, Present Status, and Future Directions 59

John Gould, Bernadette Sloyan and Martin Visbeck

1. Introduction 59
2. Development of Present Observational Capability 60
   2.1. Late Nineteenth to Mid-Twentieth Centuries 60
   2.2. Second Half of Twentieth Century 61
   2.3. Twenty-First Century: Consolidation of Capabilities and Growth of Sustained Observations 65
3. Emerging and Specialized Ocean Observing Technologies 70
   3.1. Advanced Observing Platforms 70
   3.2. Specialized Observing Systems and Technologies 71
   3.3. New Sensors 71
4. Changes in Data Volume and Coverage and Implication for Synthesis Products 72
5. The Future: Outstanding Issues and a New Framework for Global Ocean Observing 75
   5.1. Building on OceanObs'09 75
6. Conclusions 78
   References 79

4. Remote Sensing of the Global Ocean Circulation 83

Lee-Lueng Fu and Rosemary Morrow

1. **Introduction** 83
2. **Ocean General Circulation** 84
3. **Variability of the Large-Scale Ocean Circulation** 85
   3.1. Sea Surface Height 86
   3.2. Ocean Mass and Bottom Pressure 89
   3.3. Global Mean Sea-Level Change 90
   3.4. Forcing by the Atmosphere and Air–Sea Interaction 91
4. **Mesoscale Eddies and Fronts** 96
   4.1. Mapping the Eddy Field 96
   4.2. Wave Number Spectra and the Ocean Energy Cascade 98
   4.3. Seasonal and Interannual Variations in Eddy Energy 98
   4.4. Tracking Individual Eddies 100
   4.5. Surface Currents from Multisensor Mapping 102
   4.6. Eddy Fluxes of Ocean Properties 102
   4.7. Submesoscale Dynamics 103
   4.8. Eddies and Biogeochemical Processes 104
5. **Summary and Outlook** 105
   Acknowledgments 106
   References 106

Part III
Ocean Processes

5. Exchanges Through the Ocean Surface 115

Simon A. Josey, Serge Gulev and Lisan Yu

1. **Introduction** 115
2. **Air–Sea Exchange Formulae and Climatological Fields** 116
   2.1. Air–Sea Exchange Formulae 116
   2.2. Climatological Fields 117
3. **Measurement Techniques and Review of Datasets** 121
   3.1. Flux Measurement and Estimation Techniques 121
   3.2. Flux Datasets: Overview of Recent Products 123
   3.3. Flux Datasets: Evaluation Techniques 126
4. **Variability and Extremes** 128
   4.1. Impacts of Large-Scale Modes of Variability on Surface Fluxes 128
   4.2. Surface Flux Response to Anthropogenic Climate Change 129
   4.3. Transfers Under Extreme Conditions 131
5. **Ocean Impacts** 132
   5.1. Impacts on Near-Surface Ocean Layer Properties, Water Mass Transformation 132
   5.2. Impacts of Surface Fluxes on Ocean Circulation 133
6. **Outlook and Conclusions** 134
   6.1. Prospects for Improved Flux Datasets 134
   6.2. Prospects for Enhanced Observational Constraints 135
   6.3. Conclusions 135
   Acknowledgments 136
   References 136

6. Thermodynamics of Seawater 141

Trevor J. McDougall, Rainer Feistel and Rich Pawlowicz

1. **Introduction** 141
2. **Absolute Salinity S_A and Preformed Salinity S_*** 144
   2.1. Reference-Composition Salinity S_R 144
   2.2. Absolute Salinity S_A 145
   2.3. Preformed Salinity S_* 147
3. **The Gibbs-Function Approach to Evaluating Thermodynamic Properties** 147
4. **The First Law of Thermodynamics and Conservative Temperature Θ** 149
5. **The 48-Term Expression for Specific Volume** 152
6. **Changes to Oceanographic Practice Under TEOS-10** 153
7. **Ocean Modeling Using TEOS-10** 154
8. **Summary** 155
   Acknowledgments 157
   References 157

7. Diapycnal Mixing Processes in the Ocean Interior 159

Jennifer MacKinnon, Lou St Laurent and Alberto C. Naveira Garabato

1. **Introduction** 159
2. **Mixing Basics** 161
3. **Turbulence in and Below the Surface Mixed Layer** 162
   3.1. Langmuir Turbulence 162
   3.2. Inertial Motions 162
   3.3. An Equatorial Example 163
   3.4. Fronts and Other Lateral Processes 163
4. **Mixing in the Ocean Interior** 164
   4.1. Internal Wave Breaking 164
   4.2. Mixing in Fracture Zones 168

Copyright © 2013. Elsevier Science & Technology. All rights reserved.

Ocean Circulation and Climate : A 21st Century Perspective, Elsevier Science & Technology, 2013. ProQuest Ebook Central, http://ebookcentral.proquest.com/lib/utas/detail.action?docID=1495673.
Created from utas on 2021-08-05 22:46:17.

4.3. Mesoscale Dissipation as a Source of Turbulent Mixing 170
4.4. In-Depth Example: Southern Ocean Mixing 170
5. Discussion 172
5.1. Finescale Parameterizations of Turbulent Mixing 172
5.2. Global Values and Patterns 173
5.3. Representing Patchy Mixing in Large-Scale Models: Progress and Consequences 174
6. Summary and Future Directions 176
Acknowledgments 177
References 177

8. Lateral Transport in the Ocean Interior 185

B. Fox-Kemper, R. Lumpkin and F.O. Bryan

1. Introduction 185
2. Theory of Mass, Tracer, and Vector Transport 186
2.1. Fundamental Equations 186
2.2. Steady, Conservative Equations 188
2.3. Reynolds-Averaged Equations 188
2.4. Diffusion by Continuous Movements 190
2.5. Sources of Anisotropy in Oceanic Diffusion 192
2.6. The Veronis Effect 193
2.7. Streamfunction and Diffusivity 194
3. Observations and Models of Spatial Variations of Eddy Statistics 197
4. Mesoscale Isoneutral Diffusivity Variation Parameterizations 201
4.1. Parameterizations Versus Diagnosed *K* 201
4.2. New Parameterization Approaches and Future Developments 203
5. Conclusions and Remaining Questions 204
Acknowledgment 204
References 205

9. Global Distribution and Formation of Mode Waters 211

Kevin Speer and Gael Forget

1. Mode Water Observations 211
2. Global Water Mass Census of the Upper Ocean 213
3. Global Distribution of Mode Water 215
4. Formation of Mode Water 218
5. PV Framework 221
6. Mode Water and Climate 222
7. Conclusions 223
Acknowledgments 224
References 224

10. Deepwater Formation 227

John L. Bullister, Monika Rhein and Cecilie Mauritzen

1. Introduction 227
1.1. Circulation and Distribution of NADW and AABW 228
1.2. Observed Heat Content Changes in AABW 230
1.3. Observed Heat Content Changes in Upper and Lower NADW 232
2. Processes of Deepwater Formation 233
2.1. Deep Convection: The Example of Formation of Upper North Atlantic Deep Water 234
2.2. Entrainment: The Example of the Formation of the Lower North Atlantic Deep Water 234
2.3. Shelf and Under-Ice Processes: The Example of Formation of AABW 236
3. Interannual and Decadal Variability in Properties, Formation Rate, and Circulation 240
3.1. Labrador Sea Water: Variability in Properties and Formation Rate 240
3.2. Greenland–Scotland Ridge Overflow Water: Variability in Properties and Overflow Rate 243
3.3. Relationship Between Formation Rates of NADW and Changes in the AMOC 243
3.4. Antarctic Bottom Water: Variability in Properties and Formation Rate 246
4. Conclusions and Outlook 249
References 249

Part IV
Ocean Circulation and Water Masses

11. Conceptual Models of the Wind-Driven and Thermohaline Circulation 257

Sybren S. Drijfhout, David P. Marshall and Henk A. Dijkstra

1. Introduction 257
2. Wind-Driven Circulation 257
2.1. Ekman Layer and Ekman Overturning Cells 258
2.2. Sverdrup Balance 258
2.3. Western Boundary Currents and Inertial Recirculation 259
2.4. Vertical Structure of the Wind-Driven Circulation 260
2.5. Role of Bottom Topography 263

Copyright © 2013. Elsevier Science & Technology. All rights reserved.

Created from utas on 2021-08-05 22:46:17.

3. Thermohaline Circulation 264
3.1. Energetics and Global Perspective 264
3.2. Role of the Southern Ocean and Relation to the Antarctic Circumpolar Current 266
3.3. Water Mass Formation 267
3.4. Three-Dimensional Structure of the THC 268
3.5. Feedbacks and Multiple Equilibria 269
3.6. Does the South Atlantic Determine the Stability of the THC? 271
4. Transient Behaviour of the Wind-Driven and Thermohaline Circulation 272
5. Discussion and Perspective 275
Acknowledgments 276
References 277

12. Ocean Surface Circulation 283

Nikolai Maximenko, Rick Lumpkin and Luca Centurioni

1. Observed Near-Surface Currents 283
1.1. Global Drifter Program and History of Lagrangian Observations 283
1.2. Mean Surface Circulation 286
2. Geostrophic Surface Circulation 288
2.1. High-Resolution Mean Dynamic Topography 288
2.2. Striated Patterns 289
2.3. Variability and Trends 291
3. Ageostrophic Currents 291
3.1. Motion Driven by Wind 291
3.2. Centrifugal Effects 292
3.3. Nonlinear Interactions with Baroclinic Features 293
4. Regional Surface Ocean Dynamics 293
4.1. Drifter Studies in the California Current System 293
4.2. Drifter Studies off Senegal 294
4.3. Interaction of the Kuroshio with the South China Sea 295
4.4. Interaction of the Kuroshio with the East China Sea 297
5. Applications 297
6. Future Directions 298
Acknowledgments 300
References 300

13. Western Boundary Currents 305

Shiro Imawaki, Amy S. Bower, Lisa Beal and Bo Qiu

1. General Features 305
1.1. Introduction 305
1.2. Wind-Driven and Thermohaline Circulations 306
1.3. Transport 306
1.4. Variability 306
1.5. Structure of WBCs 306
1.6. Air–Sea Fluxes 308
1.7. Observations 309
1.8. WBCs of Individual Ocean Basins 309
2. North Atlantic 309
2.1. Introduction 309
2.2. Florida Current 310
2.3. Gulf Stream Separation 311
2.4. Gulf Stream Extension 311
2.5. Air–Sea Interaction 313
2.6. North Atlantic Current 314
3. South Atlantic 315
3.1. Introduction 315
3.2. Brazil Current 315
3.3. Brazil Current Separation and the Brazil–Malvinas Confluence 316
3.4. Malvinas Current 316
3.5. Annual and Interannual Variability 316
4. Indian Ocean 317
4.1. Somali Current 317
4.2. Agulhas Current 320
5. North Pacific 323
5.1. Upstream Kuroshio 323
5.2. Kuroshio South of Japan 325
5.3. Kuroshio Extension 325
6. South Pacific 327
6.1. Upstream EAC 327
6.2. East Australian Current 327
6.3. EAC Extension 328
7. Concluding Remarks 329
7.1. Separation from the Western Boundary 329
7.2. Northern and Southern Hemispheres 329
7.3. Recent and Future Studies 330
Acknowledgments 330
References 330

14. Currents and Processes along the Eastern Boundaries 339

P. Ted Strub, Vincent Combes, Frank A. Shillington and Oscar Pizarro

1. Introduction and General Background 339
1.1. Dominant Processes 341
1.2. Data and Model Fields 343
2. Low-Latitude EBCs 343
2.1. The Mean Circulation in the Eastern Tropics 344
2.2. Seasonal Changes in Surface Wind Forcing, Surface Currents, and SSH Anomalies 345
3. Midlatitude EBCs: The EBUS 349
3.1. Mean and Seasonal Circulation 349
3.2. Higher Frequency Mesoscale Variability 357

4. High-Latitude EBCs 364
4.1. The Gulf of Alaska Circulation 365
5. Climate Variability and the Ocean's Eastern Boundaries 368
5.1. The Dominant Processes 368
5.2. Climate Modes 369
5.3. Changes in Processes 371
5.4. Relating Modes to Models 372
5.5. Effects of EBCs on Climate 373
6. Summary 373
Acknowledgments 374
References 374

15. The Tropical Ocean Circulation and Dynamics 385

Swadhin Behera, Peter Brandt and Gilles Reverdin

1. Introduction 385
2. Tropical Pacific Variability 387
2.1. Western Pacific Warm Pool 387
2.2. Climate Variations: ENSO and ENSO Modoki 389
3. Tropical Atlantic Variability 391
3.1. MOC and Western Boundary Circulation in the Tropical Atlantic 391
3.2. Climate Variability 394
4. Tropical Indian Ocean Variability 395
4.1. Monsoon Ocean Circulations and Upwelling Regimes 395
4.2. The IOD 398
4.3. MJO with Indian Ocean Focus 400
4.4. IOD, ENSO, and Monsoon Interactions 400
5. Progresses in Tropical Climate Predictions 401
6. Outlooks 402
Acknowledgments 404
References 404

16. The Marine Cryosphere 413

David M. Holland

1. Introduction 413
1.1. Marine Cryosphere 413
1.2. Ice Physics 415
1.3. Ocean Impacts 416
1.4. Relation to Other Chapters 417
2. Sea Ice 418
2.1. Observations 419
2.2. Modeling 420
2.3. Ocean Mixed-Layer Interaction 421
2.4. Polynyas 422
2.5. Impact on Water Masses, and Circulation 422
2.6. Biogeochemical Ramifications 423
3. Land Ice 423
3.1. Observations 423
3.2. Modeling 423
3.3. Ocean Mixed-Layer Interaction 425
3.4. Impacts on Water Masses 426
3.5. Geochemical Tracers 426
3.6. Sea-Level Change 427
4. Marine Permafrost 428
4.1. Pure Ice 428
4.2. Methane Clathrates 428
5. Emerging Capabilities 429
5.1. Ice-Capable Observations 429
5.2. Ocean-Capable Observations 429
5.3. Ice-Capable Modeling 432
6. Cryospheric Change 432
6.1. Observed Sea-Ice Change 432
6.2. Sea-Ice Projections 434
6.3. Observed Land-Ice Change 435
6.4. Land-Ice Projections 435
6.5. Marine Permafrost 436
7. Summary 436
References 437

17. The Arctic and Subarctic Oceans/Seas 443

Cecilie Mauritzen, Bert Rudels and John Toole

1. Introduction 443
1.1. Geography 444
2. Exchanges with the Subpolar Oceans and Beyond 444
2.1. Volume Transports 445
3. Currents and Water Mass Transformations in the Arctic/Subarctic 448
3.1. The Norwegian Atlantic Current 448
3.2. Arctic Ocean 448
3.3. Canadian Archipelago and Baffin Bay 453
3.4. East Greenland Current 454
4. Evidence of Long-term Changes in the Arctic/Subarctic 454
4.1. Introduction 454
4.2. Evidence for Change in the Arctic Ocean 455
5. Conclusions 463
Acknowledgments 464
References 464

18. Dynamics of the Southern Ocean Circulation 471

Stephen R. Rintoul and Alberto C. Naveira Garabato

1. Introduction 471
2. Progress in Understanding Southern Ocean Dynamics During WOCE (1990–2002) 473

Copyright © 2013. Elsevier Science & Technology. All rights reserved.

Created from utas on 2021-08-05 22:46:17.

3. The Antarctic Circumpolar Current (ACC) 474
3.1. Structure of the ACC 474
3.2. Transport of the ACC 475
3.3. Response of the ACC to Wind and Buoyancy Forcing 475
4. Southern Ocean Overturning Circulation 477
4.1. Water Mass Transformations and Southern Ocean Overturning 477
4.2. Estimates of the Rate of Southern Ocean Overturning 478
4.3. Residual-Mean Circulation 479
4.4. Eddy Stirring of PV 482
5. Southern Ocean Change 483
5.1. Warming and Freshening of the Southern Ocean 483
5.2. Changes in the Southern Ocean Inventory of Dissolved Gases 485
5.3. Changes in Southern Ocean Water Masses 486
5.4. Ocean–Ice Shelf Interaction 487
5.5. Changes in Southern Ocean Sea Ice 487
5.6. Causes of Recent Southern Ocean Change 487
6. Summary and Outstanding Challenges 488
Acknowledgments 488
References 488

19. Interocean and Interbasin Exchanges 493

Janet Sprintall, Gerold Siedler and Herlé Mercier

1. Introduction 493
2. Interocean Exchanges at Choke Points 495
2.1. Drake Passage 495
2.2. Agulhas System 497
2.3. Indonesian Throughflow 499
3. Interbasin Exchanges 502
3.1. Nordic Seas—Atlantic Ocean 502
3.2. Mediterranean Sea—Atlantic Ocean 503
3.3. Red Sea—Indian Ocean 506
3.4. Okhotsk Sea—Pacific Ocean 507
4. Deep Passages 508
4.1. Atlantic Ocean: Romanche Fracture Zone, Vema, and Hunter Channels 508
4.2. Pacific Ocean: Samoan Passage, Wake Island Passage 509
4.3. Indian Ocean: Southwest Indian Ridge, Amirante Passage 510
5. Discussion 510
Acknowledgments 511
References 511

Part V
Modeling the Ocean Climate System

20. Ocean Circulation Models and Modeling 521

Stephen M. Griffies and Anne Marie Treguier

1. Scope of this Chapter 521
2. Physical and Numerical Basis for Ocean Models 522
2.1. Scales of Motion 522
2.2. Thermo-Hydrodynamic Equations for a Fluid Parcel 523
2.3. Approximation Methods 525
2.4. Thermo-Hydrodynamic Equations for a Finite Region 526
2.5. Physical Considerations for Transport 529
2.6. Numerical Considerations for Transport 532
2.7. Vertical Coordinates 533
2.8. Unstructured Horizontal Grid Meshes 535
3. Ocean Modeling: Science Emerging from Simulations 536
3.1. Design Considerations for Ocean–Ice Simulations 537
3.2. Analysis of Simulations 540
4. Summary Remarks 543
Acknowledgments 544
References 544

21. Dynamically and Kinematically Consistent Global Ocean Circulation and Ice State Estimates 553

Carl Wunsch and Patrick Heimbach

1. Introduction 553
2. Definition 554
3. Data Assimilation and the Reanalyses 556
4. Ocean State Estimates 559
4.1. Basic Notions 559
4.2. The Observations 561
5. Global-Scale Solutions 561
5.1. Summary of Major, Large-Scale Results 564
5.2. Longer Duration Estimates 571
5.3. Short-Duration Estimates 572
5.4. Global High-Resolution Solutions 573
5.5. Regional Solutions 573
6. The Uncertainty Problem 574
7. Discussion 575
Acknowledgments 575

22. Methods and Applications of Ocean Synthesis in Climate Research 581

Andreas Schiller, Tong Lee and Shuhei Masuda

1. Introduction 581
1.1. Definitions 581
1.2. Ocean Climate Models 582
1.3. The Global Ocean Observing System 583
1.4. Ocean Syntheses 584
2. Methods with a Focus on Developments in the Last Decade 584
2.1. Sequential Methods 584
2.2. Smoother Methods 586
2.3. Improved Procedure for Data Assimilation 587
3. Applications for Climate Research 588
3.1. Significant Progress in the Past Decade 588
3.2. Ocean Circulation 589
3.3. Upper-Ocean Heat Budget 590
3.4. Water Mass Pathways 591
3.5. Initialization for Climate Prediction 591
4. Assessments of the Impact of New and Future Climate Observing Systems 592
4.1. Indian Ocean Observing System 593
4.2. North Atlantic Meridional Overturning 594
5. Conclusion and Future Challenges 595
5.1. Coupled Data Assimilation 596
5.2. High-Resolution Data Assimilation and Climate Research 597
5.3. Understanding Consistency and Uncertainty 599
Acknowledgments 601
References 601

23. Coupled Models and Climate Projections 609

Peter R. Gent

1. Formulation of Coupled Models 609
2. Flux Adjustments 609
3. Control Runs 610
4. Twentieth Century Runs 611
5. Future Projections 614
6. North Atlantic Meridional Overturning Circulation 615
7. El Nino/Southern Oscillation 618
8. Uses of Climate Models 618
9. Limitations of Climate Models 620
10. Cutting Edge Issues 621
Acknowledgments 622
References 622

24. The Ocean's Role in Modeling and Predicting Seasonal-to-Interannual Climate Variations 625

Ben P. Kirtman, Tim Stockdale and Robert Burgman

1. Introduction 625
2. The Scientific Basis for Seasonal-to-Interannual Prediction 627
2.1. El Niño and the Southern Oscillation 627
2.2. Tropical Atlantic Variability 630
2.3. Tropical Indian Ocean Variability 630
2.4. Extratropical SST Predictability 631
3. Development of Seasonal-to-Interannual Prediction Systems 632
3.1. Historical Review 632
3.2. Ocean Data Assimilation for Initializing Forecasts and for Assessing Models 633
3.3. Current Forecast Quality 634
3.4. Biases and the Need to Improve Models—Resolved Eddies 635
4. Closing Remarks: Challenges for the Future Research 637
Acknowledgments 639
References 639

25. The Ocean's Role in Modeling and Predicting Decadal Climate Variations 645

Mojib Latif

1. Introduction 645
2. Tropical Pacific and Tropical Atlantic Decadal Variability 648
3. Description of Extratropical Decadal Variability from Observations 649
3.1. Pacific 651
3.2. Atlantic 652
3.3. Southern Ocean Centennial Variability 654
4. The Stochastic Climate Model: The Null Hypothesis for Climate Variability 654
4.1. The Zero-Order Stochastic Climate Model 654
4.2. Hyper Mode 655
4.3. Stochastic Models with Mean Advection and Spatial Coherence 655
4.4. Stochastic Wind Stress Forcing of a Dynamical Ocean 655
4.5. Stochastically Driven AMOC Variability 656
4.6. Stochastic Coupled Variability Involving the AMOC 656
4.7. Stochastically Forced Southern Ocean Variability 657

5. **Decadal Predictability** 657
6. **Summary and Discussion** 660
Acknowledgments 662
References 662

26. Modeling Ocean Biogeochemical Processes and the Resulting Tracer Distributions 667

Christoph Heinze and Marion Gehlen

1. **Goals of Ocean Biogeochemical Modeling within Climate Research** 667
2. **Concepts and Methods of Biogeochemical Ocean Modeling** 668
   2.1. Tracer Conservation and Classification of Tracers 668
   2.2. Classification of Models 669
   2.3. Biogeochemical Cycles and Processes Included in BOGCMs 671
   2.4. Links Between the Water Column and Other Reservoirs 676
   2.5. Model Coupling, Model Resolution, and Model Complexity 678
3. **Model Results, Evaluation, Skill, and Limits, and Model Data Fusion/Data Assimilation** 679
   3.1. Ability of BOGCMs to Match Natural Tracer Distributions to First Order 679
   3.2. Optimization of BOGCMs 680
4. **Major Marine Carbon Modeling Findings of the Recent Decade** 682
   4.1. Future Biogeochemical Climate Projections Including Oceanic Carbon Cycle Feedback 682
   4.2. Modeling the Interaction of Ocean Circulation with Greenhouse Gas Fluxes and Biological Production 684
   4.3. Model Assessment and Detection Limits of Ocean Acidification 685
5. **Conclusion** 686
Acknowledgments 686

Part VI
The Changing Ocean

27. Sea-Level and Ocean Heat-Content Change 697

John A. Church, Neil J. White, Catia M. Domingues, Didier P. Monselesan and Elaine R. Miles

1. **Introduction** 697
2. **Fundamental Concepts of Sea-Level Change** 698
3. **Observations of Sea-Level Change** 700
   3.1. Sea-Level Change on Multimillenial Time Scales 700
   3.2. Instrumental Observations of Sea-Level Change 701
   3.3. Reconstructions of Global Mean Sea Level 703
4. **Observations of Ocean Heat-Content and Steric Sea-Level Change** 704
   4.1. Historical Observations 704
   4.2. Global Ocean Heat-Content and Thermal-Expansion Estimates 705
   4.3. The Global Energy Balance 708
5. **Understanding Observed Sea-Level Change** 709
   5.1. Changes in Ocean Mass 710
   5.2. The Sea-Level Budget 711
   5.3. Recent Direct Observations of Ocean-Mass Changes 712
   5.4. Modeling Global Mean Sea-Level Change 713
6. **Prediction and Projections of Future Sea-Level Change** 714
   6.1. Interannual Sea-Level Predictions 714
   6.2. Sea-Level Projections 714
   6.3. The Regional Distribution of Sea-Level Change 717
7. **Future Outlook** 718
Acknowledgments 718
References 718

28. Long-term Salinity Changes and Implications for the Global Water Cycle 727

Paul J. Durack, Susan E. Wijffels and Tim P. Boyer

1. **Introduction** 727
2. **Salinity Observations in the Global Oceans** 729
   2.1. Measuring Ocean Salinity 731
   2.2. Definitions of Ocean Salinity 732
3. **Observed Salinity Variability** 734
4. **Observed Long-Term Changes to Ocean Salinity** 737
   4.1. Observed Surface Salinity Changes 737
   4.2. Observed Zonal-Mean SSS Changes 738
   4.3. Observed Subsurface Salinity Changes 739
   4.4. Quantifying Rates of SSS Change 740
5. **Ocean Salinity—Relationship to the Global Water Cycle** 741
   5.1. Linking Evaporation and Precipitation Fluxes to Salinity 741
   5.2. Idealized Ocean Responses to E–P Forcing Experiments 743

6. **Modeling Ocean Salinity Variability and Change** 744
6.1. Considerations when Analyzing Modeled Salinity 745
6.2. Modeled Water Cycle Changes Assessed from Ocean Salinity 747
7. **Summary and Outlook** 750
Acknowledgments 751
References 752

29. Ocean Heat Transport 759

Alison M. Macdonald and Molly O. Baringer

1. **Background** 759
1.1. Energy Balance in the Atmosphere 760
1.2. Energy Balance at the Ocean Surface 761
1.3. Heat Transport in the Ocean 762
2. **Calculation of Ocean Heat Transport** 762
2.1. Indirect Ocean Heat Transport Estimation 762
2.2. Direct Ocean Heat Transport Estimation 765
3. **Observation-Based Estimates of Ocean Heat Transport** 767
3.1. Atlantic 768
3.2. Indo-Pacific 772
3.3. Southern Ocean 773
4. **Understanding Mechanisms** 774
4.1. Barotropic-Baroclinic-Horizontal Decomposition (BBH) 774
4.2. Shallow Subducting Overturn Decomposition (SOV) 774
5. **Ocean Heat Transport Variability** 775
5.1. Repeat Hydrography 776
5.2. Transition to Timeseries Arrays 776
5.3. Float Program 778
5.4. Ships of Opportunity and Expendable Instrumentation 778
5.5. Summary of Observational Approaches 779
6. **Synthesis and Summary** 779
References 780

30. The Marine Carbon Cycle and Ocean Carbon Inventories 787

Toste Tanhua, Nicholas R. Bates and Arne Körtzinger

1. **Introduction and Background to the Marine Carbon Cycle** 787
2. **History of Observations and Capacity to Collect Marine Carbon Cycle Measurements** 789
2.1. Measurable Parameters of the Seawater CO_2–Carbonate System 789
2.2. History and Coordination of Global-Scale Marine Carbon Cycle Measurements 790
2.3. Data Synthesis Products and Quality Control Procedures 791
3. **The Anthropogenic Perturbation of the Marine Carbonate System** 793
3.1. Review of Recent Estimates of Global C_{ant} Storage 794
3.2. Monitoring Decadal Change of DIC and C_{ant} 795
3.3. Feedbacks and the Non-Steady-State Ocean 796
4. **Ocean Inventories, Storage Rates, and Uptake of CO_2 and C_{ant}** 798
4.1. Indian Ocean 799
4.2. Pacific Ocean 800
4.3. Atlantic Ocean 802
4.4. Arctic Ocean 803
4.5. Marginal Seas 805
5. **Ocean Time-Series Validation of Trends in DIC/pCO_2/C_{ant}** 806
6. **Conclusion and Outlook** 809
Acknowledgments 809
References 810

31. Marine Ecosystems, Biogeochemistry, and Climate 817

Scott C. Doney

1. **Introduction** 817
2. **Phytoplankton, Primary Production, and Climate** 820
3. **Climate Impacts on Higher Trophic Levels** 824
4. **Ocean Acidification** 828
5. **Deoxygenation and Hypoxia** 830
6. **Marine Biogeochemical Cycles–Climate Interactions** 831
7. **Observational and Research Directions** 833
Acknowledgments 834
References 834
